WORK EXPERIENCE

Lead Full Stack Developer & UI/UX Designer | DefTechLink May 2025 – Jul 2026

- Led the UI/UX design process using Figma, translating wireframes into responsive, accessible interfaces using React, Material UI, and reusable design systems.
- Developed and maintained two SaaS platforms (DefTechLink and DefTechDash), implementing features across frontend, backend, and database layers.
- Built a scalable React component system featuring reusable cards, tables, filters, dialogs, and skeleton loaders, implementing dynamic filtering, debounced search, pagination, role-based views, optimistic UI updates, and Flask REST API integration using TanStack Query.
- Developed the Learn content pipeline, enabling creators to draft, edit, preview, and schedule content through a custom HTML editor or PDF/video uploads.
- Integrated Stripe Embedded Checkout with tier-based access control and user state synchronization.
- Collaborated in Agile sprints, contributing to planning, standups, and iterative delivery cycles.

Software and Data Engineer Intern | SMX Jun 2024 – Aug 2024

- Built and deployed NLP-based sentiment analysis pipelines using spaCy, Regex, and Hugging Face's RoBERTa in AWS WorkSpace, leveraging PostgreSQL for data storage and querying.
- Conducted data collection, preprocessing, geospatial plotting, and visualization using Grafana, transforming raw data into actionable insights.
- Presented findings to senior executives, including the CEO, resulting in actionable insights.

EDUCATION

UNIVERSITY OF SOUTH FLORIDA | Tampa, FL Aug 2021 – May 2025

Bachelor of Science in Computer Science

Cumulative GPA: 3.89

Certifications: Web Development (HTML/CSS/Bootstrap, JavaScript & APIs), Intercultural Skills

SKILLS

Languages:	Python, JavaScript, HTML/CSS, C/C++, Java, SQL
Frontend:	React, Material UI, TanStack Query, Bootstrap, TipTap, Electron.js
Backend:	Flask, SQLAlchemy, REST APIs
Data & Big Data:	PostgreSQL, SQLite, Hadoop
Tools:	Git (GitHub, GitLab), Figma, AWS WorkSpaces, Linux/macOS
Methodologies:	Agile, Scrum, UML

KEY PROJECTS

SunnySide Weather | *ReactJS, Electron.js, Node.js, Express, SQLite, HTML/CSS, MUI, Vite* | [GitHub](#)

- Developed a cross-platform desktop weather app using ReactJS + Electron with persistent city storage, Open-Meteo/Geocoding integration, and food-mood pairing recommendations.
- Built an Express + SQLite backend with CRUD support for locations, user preferences, and local data caching.
- Designed the full UI in Figma and created custom food-themed visual assets to reinforce branding.

Tic-Tac-Poké | *ReactJS, Electron.js, HTML/CSS, Vite* | [GitHub](#)

- Designed and developed a cross-platform desktop app using Electron.js, packaging a custom Pokémon-themed Tic-Tac-Toe game with an engaging UI.
- Utilized Vite for modern JavaScript tooling and faster build times in a React-based frontend.
- Designed the entire UI/UX flow using Figma, creating wireframes and high-fidelity mockups; all in-game assets drawn in Procreate.
- Prioritized intuitive gameplay and user-centric design, delivering a seamless user experience.
